

Mechanical Workshop & Valves

Our Mechanical Workshop specializes in preventive and corrective mechanical maintenance, offering complete in-house solutions for industrial equipment. With advanced tools and skilled technicians, we support operational reliability through high-quality repairs, refurbishments, and fabrication services.

Valve Repair (On/Off, PSV)

- Inspection, repair, calibration, and testing of isolation valves and pressure safety valves to ensure safe and reliable operation.

Lifting Equipment Repair & Recertification

- Maintenance and load testing of lifting gear such as hoists, cranes, and slings, including third-party certification support.

Pump & Compressor Maintenance

- Overhaul and servicing of various types of pumps and compressors, including alignment, bearing replacement, and performance testing.

Mechanical Seals Repair

- Reconditioning and replacement of mechanical seals to prevent leakage and restore equipment efficiency.

Mechanical Workshop & Valves

Machining, Welding & Fabric Maintenance

- Precision machining, structural welding, and component fabrication carried out to industrial standards for repair or modification.

Load Cells & Scale Calibration

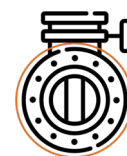

- Accurate calibration and certification of load cells, industrial scales, and weighing systems to maintain measurement accuracy.

Sandblasting & Painting

- Surface preparation and protective coating services for equipment and structures to extend life and prevent corrosion.

VALVES

Comprehensive valve lifecycle services both on-site and off-site, supporting diagnostics, maintenance, and certification.

ONSHORE Services

- Surveys, sizing & diagnostics
- Safety valve certification
- Modernization and upgrades
- Outage and lifecycle planning

OFFSHORE Services

- All types of valve testing and repair
- Actuator and controller maintenance
- Certification of relief valves
