

Scaffolding & Painting

Field Services

We offer comprehensive scaffolding, surface preparation, and protective coating services to support industrial maintenance, construction, and shutdown operations. With safe access solutions, corrosion protection systems, and insulation works, our services ensure asset durability and operational safety across onshore and offshore environments.

Sandblasting

- Surface preparation using abrasive blasting techniques to remove rust, old coatings, and contaminants before painting or inspection.

Painting

- Application of protective coatings to prevent corrosion and extend the life of structural steel, piping, and equipment in industrial environments.

Scaffolding Equipment Rental

- Rental of high-quality scaffolding systems for short- or long-term projects, with flexible logistics and support options.

Scaffolding

- Design, erection, and dismantling of access scaffolding for maintenance, inspection, and construction activities—delivered with full safety compliance.

Insulation

- Thermal, acoustic, and personnel protection insulation for piping, vessels, and equipment—reducing energy loss and enhancing safety.

Specialized Scaffolding Manpower

- Provision of trained and certified scaffolders to support complex or high-risk projects requiring specialized access solutions.
