

Flexible Hoses Workshop

Our Flexible Hoses Workshop specializes in the supply, maintenance, and integrity management of flexible hoses and hydraulic systems. Through our partnership with Hydrasun, we offer data-driven solutions, ensuring safety, reliability, and regulatory compliance for both onshore and offshore operations.

Offshore Surveys

- On-site inspection and assessment of hose and hydraulic systems to evaluate condition, identify risks, and plan proactive maintenance.

Hydraulic System Troubleshooting & Upgrades

- Diagnosis and resolution of faults in hydraulic circuits, along with system optimization and upgrades for improved performance.

Hose Assembly, Testing & Certification

- Custom hose assembly, pressure testing, and certification in compliance with industry standards to ensure safe and reliable use.

Flushing & Filtration

- Hydraulic system cleaning to remove contaminants, ensuring fluid cleanliness and protecting sensitive components from wear and failure.

Flexible Hoses Workshop

Accumulator & Piping System Maintenance

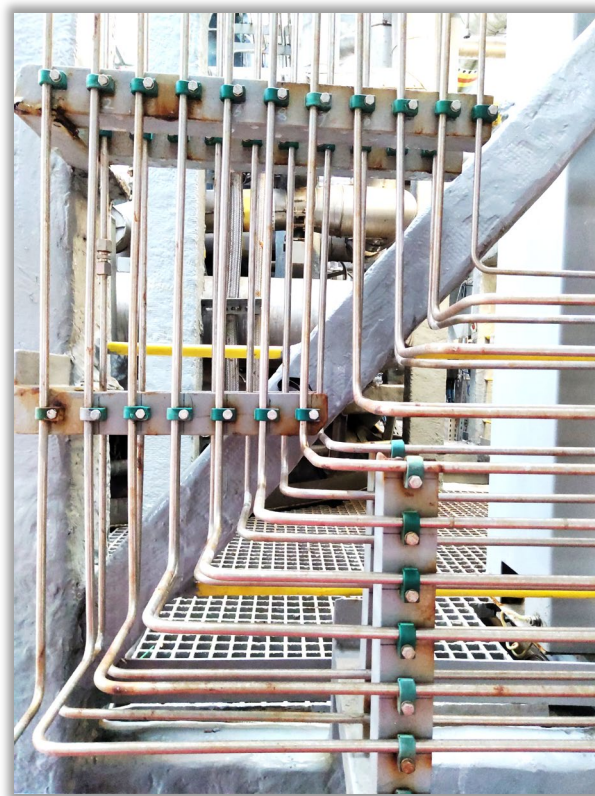

- Precision machining, structural welding, and component fabrication carried out to industrial standards for repair or modification.

SBT (Small Bore Tubing) Integrity Management

- Inspection, maintenance, and replacement of small bore tubing systems to prevent leaks, improve reliability, and meet safety standards.

Data Management via Hydralink

- Digital tracking of hose and component lifecycles using Hydralink for accurate monitoring, scheduling, and compliance documentation.
