

Energy Facilities Maintenance

We provide integrated technical services for the maintenance and operation of energy and industrial infrastructure. With 24/7 availability and rapid-response capabilities, our teams ensure system reliability, safety, and operational continuity across critical facilities.

Electrical & Mechanical Systems

- Engine assessments and diagnostics conducted on-site to evaluate performance, detect wear, and plan maintenance activities.

Fire Safety & Water Treatment Systems

- Complete disassembly, inspection, and rebuild of engines to restore them to optimal working condition, including replacement of critical components.

HVAC and Generator Maintenance

- Routine servicing and repairs to address faults, reduce downtime, and extend engine lifespan in demanding operating conditions.

Corrective & Predictive Maintenance

- Specialized cold repair techniques for cast iron parts, avoiding thermal stress and ensuring structural integrity.

Multi-Skilled Teams for Rapid Deployment

- Versatile and experienced technicians capable of handling diverse systems and emergency situations, available around the clock for on-site support.
