

EPC Projects

We deliver comprehensive EPC (Engineering, Procurement, and Construction) solutions tailored to complex industrial and energy sector projects. Our services cover the full project lifecycle ensuring quality, efficiency, safety, and on-time delivery for our clients.

Engineering & Design

- Comprehensive multi-discipline design and engineering services using advanced tools to deliver efficient, compliant, and constructible solutions.

Procurement Services

- Global sourcing of equipment and materials, ensuring timely delivery, quality assurance, and cost efficiency.

Project Management

- End-to-end coordination across all phases, managing scope, schedule, cost, and risk to ensure successful project execution.

Construction & Installation

- On-site execution of civil, mechanical, and electrical works, ensuring high standards of safety, quality, and performance.

EPC Projects

Welding & Fabrication (Turnkey)

- End-to-end welding and fabrication solutions for piping, structural steel, and custom industrial components—covering design, workshop fabrication, on-site assembly, and quality control to deliver ready-to-use installations.

Quality Assurance & Control (QA/QC)

- Strict quality control measures throughout all project phases to meet industry standards and client requirements.

As-Built Documentation & Handover

- Accurate as-built records and documentation to support seamless project closeout and operational readiness.

Post-Construction Support

- Ongoing technical assistance, maintenance support, and warranty follow-up to ensure long-term asset performance.

Pre-Commissioning & Commissioning

- System checks, testing, and startup procedures to ensure all systems are ready for safe and reliable operation.

HSE Management

- Comprehensive health, safety, and environmental practices embedded in all activities to ensure zero harm and regulatory compliance.
